

A. Reflection On Feedback & Future Implementation

Write a short reflection discussing how both peer and client feedback influenced changes to your site. Include details on:

The most significant changes I will make based on this feedback is to fix the styling to make it look more professional with a better text layout and navigation bar upgrades. The feedback given helped better align me with the client goals by reminding me that I need to start the implementation soon of the “create project” tree builder because that will be the most time consuming part of this project. One suggestion I decided not to implement was possibly changing the background colors. I choose not to implement this because I think they are a good fit for this website and theme. The features that still need to be implemented are changing styling and finishing my “create tree” page.

Feedback from client:

- 4/3/2026 5pm
- Meeting was on zoom
- Summary of key points discussed including:
 - We talked about how the site could use some styling upgrades and work towards starting the implementation of the create project section where users will be given a template to help them break down their projects to solve more efficiently.
 - Some styling features will be updated such as navigation bar styling and a cleaner text layout
 - Any peer feedback the client chose not to incorporate and their reasoning.
 - No
 - Additional feedback or concerns raised by the client.
 - Concerned about how much I have left to implement with time we have left in this course
- A list of changes or refinements to be made based on the discussion.
 - styling
 - start “create project” implementation
